You can always find a job when you are a skilled worker: make your future with us!

Rovaniemi Technical College

The technical college in Rovaniemi offers basic vocational education and training. Each year we have about 1000 students studying in many different fields. The staff amounts to 130.

The basic courses consist of 120 credits and take three years to complete. There is also the possibility to combine vocational studies with gymnasium and graduate both from the vocational school and take the matriculation examination in four years. Any studies after comprehensive school will compensate the credits and therefore shorten the time needed for qualification. Students for the basic courses in technology and transportation are selected on the basis of their comprehensive school grades.

A basic vocational certificate is a secondary school certificate which gives the qualification to continue studies in vocational colleges, polytechnics and universities. Typical titles after further studies are engineer and diploma engineer. Vocational further studies also include many professional and special professional studies.

An electrician is familiar with the safety regulations. The work requires strong professional skills, a lot of knowledge and responsibility.

Rovaniemi Vocational Adult Education Centre

Rovaniemi vocational adult education centre is specialized in training adults and trains students all over Lappland in almost all vocational fields. The Education centre is a commercial enterprise and is one of the 40 independent centres in Finland. The staff includes 50 persons, and 2000 students, out of whom about 300 are studying every day.

Our education centre was founded in 1971. Today we produce professional workers with basic vocational qualification, further vocational qualification and specialized vocational qualification. The education is organized by employment exchange bureau, Ministry of education as further education, indenture or personnel training in enterprises. The education always includes a diploma project, which may be considered as the final proof in vocational skills of each student.

We also offer other educational services, like training the staff of an enterprise, rendering short specialized courses, and promote industrial and commercial life of the region with various projects. The courses may vary from a day long up to two years. With us you can get a vocational qualification or update your previous certificate and skills.

A food processor refines high-quality products from raw materials.

Vocational Final Proofs and Diploma Projects

Vocational final proof is a part of the education of young students, whereas the diploma project belongs to the vocational adult education. The diploma can be achieved after receiving preparatory education, or simply by giving a professional proof, if the vocational skills are considered to be so strong that no further education is needed.

The proofs included in vocational basic education are meant for ensuring the student has achieved a sufficient level in the professional skills. They measure the student's abilities in practice, and the aim is to give the final proof in connection with the practical training period in enterprises and companies. The proofs only include vocational studies.

The adults show their professional skills by performing the diploma project, and will receive a examination certificate. The system supports lifelong learning and offers the enterprises a significant means of developing their personnel skills. Diploma projects may be performed in any field of vocational education.

The training in logistics, heavy-duty vehicles, and surveying technology provide professionals for the demanding special fields like mining industry.
